# Contents

<b>Preface</b>	<b>xiii</b>
<b>Preface to first edition</b>	<b>xv</b>
<b>Authors</b>	<b>xvi</b>
<b>1 Fundamentals</b>	<b>1</b>
Units and quantities	2
Criteria which affect human comfort – definitions	4
Thermal indices	8
Methods of measurement	10
Application	13
Practical guidelines to comfort	16
Comfort model	16
<b>2 Sustainability</b>	<b>19</b>
Aim of this chapter	19
What we mean by sustainable development	19
Drivers for sustainable development	21
The legislative and policy framework	24
Environmental assessment methods	30
Sustainable strategies for heating and air-conditioning	31
<b>3 New legislation</b>	<b>43</b>
Introduction	43
The Building Regulations	43
Part L conservation of fuel and power	44
Existing buildings	46
The energy performance of buildings directive	46
The F-Gas Regulations	50
Health and safety legislation	50
The Construction (Design and Management) Regulations 1994	52
The Construction (Design and Management) Regulations 2007	52
Who are the designers?	53
Hazard and risk	53
Competence	53
Other legislation	54
<b>4 The building in winter</b>	<b>55</b>
Extraneous influences	55
A typical construction features	65

Condensation	72
Air infiltration	75
Temperature difference	80
Miscellaneous allowances	84
Continuous versus intermittent operation	87
Steady state and dynamic response	90
<b>5 The building in summer</b>	<b>93</b>
Extraneous influences	93
Primary influences	95
Sun-path diagrams	95
Incidence of solar radiation	97
Solar gain through opaque surfaces	98
Solar gain through glazing	104
Structural shading	107
Building shape	109
Building orientation	110
Conduction	110
Application	111
Air infiltration and ventilation	112
Miscellaneous heat gains	113
Temperature difference	115
Intermittent operation	116
<b>6 Building energy and environmental modelling</b>	<b>119</b>
Design calculations	119
Compliance calculations	122
Dynamic thermal modelling	124
Computational fluid dynamics	127
The way forward	129
<b>7 Heating methods</b>	<b>131</b>
Legislation	131
Heating systems generally	133
Factors affecting choice for different building types	134
Purposes of a heating system and how to maintain a 'comfortable environment'	136
Heating system selection	137
Choice of fuel/energy source	140
Cost considerations	142
Heating system types	142
Direct systems	142
Indirect systems	154
Heat distribution system selection	156
Emitter types and selection	158
<b>8 Electric storage heating</b>	<b>161</b>
Introduction	161
The future for electric heating	162
Types of electric storage heating	163
Methods of storage	163
Capacity of the heat store (room stores)	164
Capacity of central stores	169

Equipment for room stores	170
Equipment for central store	173
Control of central stores	178
<b>9 Indirect heating systems</b>	<b>179</b>
Introduction	179
Water systems – characteristics	179
Low-temperature hot water systems – piping arrangements	186
Steam systems – characteristics	192
Steam systems – piping arrangements	198
Air systems – characteristics	200
Pipework heat emission	202
Internal pipework distribution systems and jointing methods	206
<b>10 Heat emitting equipment</b>	<b>211</b>
Principal criteria	211
Combined radiant and convective heating	212
Convective heating	217
Radiant heating	227
<b>11 Pumps and auxiliary equipment</b>	<b>233</b>
Pumps	233
System pressurisation	242
Non-storage calorifiers	249
Condensate handling equipment	251
Steam pressure reduction	255
Heat meters	255
Air venting, etc.	257
Air venting	259
Corrosion	260
<b>12 Piping design for indirect heating and cooling systems</b>	<b>263</b>
Heating systems	263
Water systems – principles	263
Water systems – applications	266
Water systems – generally	275
Water systems – gravity circulation	276
Steam systems – principles	279
Provision for thermal expansion	282
Expansion joints and loops	283
Cooling systems	286
Condenser water systems	288
Water treatment	289
On-going water treatment	291
<b>13 Boilers and burners</b>	<b>293</b>
Basic considerations	293
Criteria for boiler selection	295
Boiler houses – size and location	299
Types of boiler	300
Boiler fittings and mountings	307

Boiler firing – solid fuel	309
Boiler firing – oil fuel	313
Boiler firing – gaseous fuel	317
Miscellaneous boiler/burner equipment	321
Instrumentation	321
<b>14 Renewable technologies</b>	<b>323</b>
Introduction	323
Solar thermal systems	323
Biomass	330
Ground source heating and cooling	336
Photovoltaics	342
Wind turbines	343
<b>15 Combined heat and power</b>	<b>347</b>
Introduction	347
Basic components	348
The application of combined heat and power in buildings	351
Integration into buildings	353
Emergent technologies	357
<b>16 Fuels, storage and handling</b>	<b>361</b>
Storage capacity	361
Solid fuel	361
Liquid fuel	364
Natural gas	372
Liquefied petroleum gas	374
Electricity	376
Biomass fuels	377
<b>17 Combustion, emissions and chimneys</b>	<b>379</b>
Combustion processes	379
Sample calculations	383
Chimneys	386
Chimney construction	393
Special methods for flue gas disposal (natural gas)	396
Air supply to boiler houses	399
<b>18 Ventilation</b>	<b>401</b>
Air supply for human emissions	402
Air supply for other reasons	403
Air change rates	404
Criteria for air supply to occupied spaces	405
Methods of ventilation	408
Kitchens	419
Special applications	424
Recirculation units	427
<b>19 Air-conditioning</b>	<b>431</b>
General principles	432
High-velocity systems	439

	All-air systems	439
	Air–water systems	446
	Other systems	451
	Alternative methods of cooling	458
	Summary of systems and application	462
<b>20</b>	<b>Air distribution</b>	<b>463</b>
	General principles	463
	Distribution for air-conditioning	469
	Special air distribution applications	484
<b>21</b>	<b>Ductwork design</b>	<b>489</b>
	Ductwork	489
	Ductwork components and auxiliaries	494
	Pressure distribution in ducts	499
	Thermal insulation of ducts	507
<b>22</b>	<b>Fans and air treatment equipment</b>	<b>511</b>
	Fans	511
	Fan types and performance	511
	Specific fan powers	519
	External louvres	519
	Air filtration	521
	Air humidification	528
	Air heating and cooling coils	533
	Packaged air handling plant	537
	Heat recovery systems	538
	Air-to-air heat exchangers	538
	Unitary equipment	545
<b>23</b>	<b>Calculations for air-conditioning design</b>	<b>549</b>
	Heat gains	549
	Psychrometry	550
	Application	552
	Design calculations for other systems	561
	System diagrams and automatic controls	562
<b>24</b>	<b>Refrigeration and heat rejection</b>	<b>563</b>
	Mechanical refrigeration	563
	Refrigerating media	566
	Types of refrigeration plant	569
	Choice of refrigeration plant	574
	Refrigeration plant components	581
	Heat recovery	591
	Heat pumps	593
<b>25</b>	<b>Hot water supply systems</b>	<b>599</b>
	Pipework losses	599
	Water conservation	599
	Choice of system	600
	Local systems	600
	Central systems	607
	Cylinders, indirect cylinders and calorifiers	610
